Hi Caryn,

Attached is our latest and greatest screenshot of a three-level grouping (Tier, Stage, and AAship), along with the output each of the export options. Let us know if it meets your expectations.

Essentially the expected behavior for all the exports is that the Grouped By column display first on the exported CSV/Excel/Word document. Something we have observed is that in Word 2010 it auto adjusts the columns based on the content; however, if open by something like LibreOffice it make all columns the same width.

Also attached is an Excel 2007+ formatted file (.xlsx), let us know if the error appears when opening this file. It should resolve the error message you were getting before regarding the ESRI Map plug-in when you opening an Excel Classic files (.xls).
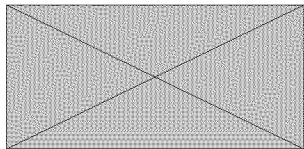

Thanks,

Em

Hi, Caryn –

Emily Savelli is making a couple tweaks to Grouping functionality we discussed today and will send you screen shots, as well as Word and Excel output examples.

For new reports requested, we have the following:

Add reports "Consultations" and "Reports to Congress" in addition to the report already requested, "ADP Milestones – Past" [those additional reports will require more TD/detail in the future]

We added this to our internal workflow and it is on hold pending technical direction.

EPA: specifics on upcoming reports, revised inputs, revised outputs, and revised default selections for future discussion pending the item below on report revision format.

Thanks!

Debbie
